PROJECTS

ByteDocs AI — AI-Powered Document Assistant

FastAPI, HTML/CSS/JavaScript, PyMuPDF, Sentence-Transformers, FAISS, Gemini API

- Built a full-stack Retrieval-Augmented Generation (RAG) pipeline from scratch (no LangChain) using a FastAPI backend and a vanilla HTML/CSS/JavaScript frontend.
- Implemented PDF parsing with page-level text extraction (PyMuPDF), semantic chunking, and embedding generation using Sentence-Transformers (all-MiniLM-L6-v2).
- Designed a FAISS vector store for fast semantic search and integrated the Gemini API to generate grounded, source-cited answers from uploaded documents.

SalesPulse — Data Analytics Dashboard for Business Insights

Python, Pandas, NumPy, FastAPI, SQLite, Plotly

- Built an end-to-end data analytics pipeline that ingests raw sales data (CSV/Excel), cleans and transforms it with Pandas/NumPy, and stores it in SQLite for querying.
- Developed interactive Plotly dashboards visualizing revenue trends, regional performance, and product-level KPIs with drill-down filtering.
- Exposed analytics through a FastAPI backend with cached queries, cutting dashboard load time significantly on large datasets.

Hospital Management System

HTML, CSS, JavaScript, Firebase

- Developed a full-stack web portal with Firebase authentication, real-time patient records, and doctor allocation.
- Integrated chatbot support and secure login flow with real-time database synchronization.
